Application No.: 10/043,206

LISTING OF CLAIMS:

- 1. (Cancelled)
- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Previously Presented) A device for fusing a toner image to a sheet comprising:
 - a heated fusing roll;
- a pressure roll in circumferential contact with said heated fusing roll to form a nip therebetween;
- a manifold, adjacent said the nip formed by said heated fusing roll and said pressure roll, said manifold connected to an air supply source, wherein said manifold defines an outlet for providing a directed stream of air from said manifold;
- an air source control to vary an air pressure supplied to the manifold in response to a predetermined condition, wherein said predetermined condition is determined based upon the weight of a sheet.
- 5. (Previously Presented) An electrophotographic printing machine having a fusing apparatus, comprising:
 - a print engine for forming and depositing a toner image on a substrate;
 - a heated fusing roll;
- a pressure roll in circumferential contact with said heated fusing roll to form a nip therebetween;
- a manifold, adjacent said the nip formed by said heated fusing roll and said pressure roll, said manifold connected to an air supply source, wherein said manifold defines an outlet for providing a directed stream of air from said manifold;
- an air source control to vary an air pressure supplied to the manifold in response to a predetermined condition, wherein said predetermined condition is determined based upon the weight of a sheet.
